SKILLS

Languages: Ruby, Javascript, HTML5, CSS, SQL, Portuguese, Spanish, French
Databases: MongoDB, Mongoose, PostgreSQL, ActiveRecord, Parse
Frameworks: Rails, Node.js, Express, AngularJS
Technologies: Rspec, jQuery, AJAX, JSON, APIs, Bootstrap, Heroku, Github.

EXPERIENCE

Full Stack Web Developer – General Assembly, San Francisco – Sept –Dec 2015

Completed a 12-week, intensive web development course where I learned the latest technologies used in full-stack web development. Working individually, in pairs (pair programming), and on a team, I developed fully functional web applications.

Projects:

XfitFinder | xfitfinder.com

Xfitfinder is a tool used for locating, rating, and reviewing Crossfit affiliates around the world.
Technologies: Ruby on Rails, Javascript, HTML5, CSS, Bootstrap, PostgreSQL, ActiveRecord

Gather-It | gather-it.herokuapp.com

Gather-it allows users to easily create grocery lists that help track food purchases so they can be consumed while fresh. For convenience, frequently purchased items reappear on the list once items have expired. Users can search for recipes based on the food they have, prioritizing ingredients that may spoil first. I built both front and back end of this application using MongoDB and an external API.

Technologies: Javascript, jQuery, Express, Node, Mongo, HTML5, CSS, Bootstrap, BCrypt

Savit | savitapp.herokuapp.com

Savit is a simple budgeting app that helps users create a daily budget with the idea that if one can save money daily, then one can achieve their savings goals! The app also provides tools to track savings and spending history over time and provides information about spending habits.

Technologies: Ruby on Rails, Javascript, jQuery, HTML5, CSS, Bootstrap, PostgreSQL, ActiveRecord

EDUCATION

BA in Mathematics, Reed College, Portland, OR – 1998

Web Development Immersion, General Assembly, San Francisco, CA – 2015

EMPLOYMENT

Tax Consultant, Enrolled Agent, Math LLC – Self-Employed – 2008-Present
